 **FIRESCAPE™**

**Fire Destroys,
Firescape Destroys Fire**

APPROVED BY

London Fire Brigade Enterprises (LFB) are an official partner of Firescape Global, and fully approve our products. They have helped establish the testing and accreditation criteria, which has enabled us to develop the products and their many applications. Consequently, Firescape technology can be implemented effectively resulting in saving lives and minimising the ravages of fire. London Fire Brigade Enterprises are now an official reseller of the Firescape product range.

It is our aim to supply our technology, Bulk-Safe to national Fire & Rescue services worldwide. This will enable fire departments to induce the product directly into their onboard tanks that are currently reserved for foam. One of the main benefits is that Bulk-Safe can be diluted with water at high pressure resulting in the fire fighting process being greatly reduced as it provides instant cooling whilst reducing the environmental impact. We have spent a great deal of time researching and developing our ground breaking fire fighting technology and we felt it important to be able to deploy our product in its most effective way possible. So to compliment the Bulk Safe we shall provide Fire Services with our 9 Litre Extinguish-Safe product which provides a safe and rapid fire extinguishing capability as demonstrated on our gallery. Please visit www.firescape-global.com

 **EXTINGUISH-SAFE™**

 **BULK-SAFE™**

In addition to providing Bulk and Large cylinder solutions to aid Fire Services & Brigades. We have Also developed useful lightweight easy to use applications for the domestic market.

PAN-SAFE™

Pan-Safe is a "must have" safety product for every home. It offers a much safer and rapid way of extinguishing dangerous pan fires, within seconds.

According to the U.K. Fire & Rescue Services, nearly 20 people are killed or injured every day in accidental fires that start in the kitchen, the most common of these are caused by fat frying.

Unlike any other fires, cooking oil fires are almost impossible to safely extinguish using conventional methods and many people become seriously injured while trying to do so.

Weighing only 203g and containing 120ml of non-hazardous liquid, it can be used safely and effectively.

SPRAY-SAFE™

As a company, it is always our aim to push the boundaries and develop new innovations to deliver our ground-breaking fire technology in new and inventive ways. Because our technology is far superior to traditional fire fighting products it has enabled us to develop a lightweight (but strong) 335ml plastic directional aerosol (shaped for ease of use) with less risk of denting, rupture or rusting. It can effectively tackle fire situations previously not contemplated. It's also BPA free with an extremely low carbon footprint. It's unique design allows the spray to be used even upside down with no loss of flow.
